FMX's Schedule Star Integration Template

Thank you for purchasing FMX's Schedule Star integration! To begin, your Customer Success Manager will configure your facilities in FMX based on the current structure in Schedule Star. It is important that the same facilities exist in both systems to optimize data accuracy.

FMX pulls data from specific fields within Schedule Star and synchronizes that data into the corresponding fields within our software. These fields include:

- Event Title
- Event Date
- Event Start and End Time
- Transportation Departure Date
- Facility
- Home or Away Game*
- Gender
- Level
- Opponent
- Sport

*The above fields are the *only* fields that FMX can retrieve data from. All other fields are *not* included in the integration.

**Since the addition of buildings impacts product pricing, FMX sites do not include opponent buildings. For this reason, home and away games are hosted under one building in FMX, i.e. High School.

For the best experience, we highly encourage that these fields are populated on any events created in Schedule Star. This will ensure that the event data matches between the two systems! FMX will also require a Schedule Star account in order to obtain necessary information to complete the integration. This account will need access to the Calendar.

FMX *will not* alter or remove any data within Schedule Star.

* Away events will be associated with your team's building under a separate "Away" request type.

For example, if your Varsity football team was playing an away game at Central High School, the event in FMX would show underneath your high school building with Central HS listed as the opponent, indicated with an "Away" request type.

If you have any questions during this process, please reach out to your Customer Success Manager!
